Evaluation Rubric of Graduation Projects

Dear Students,

Below is the Evaluation Rubric of Graduation Projects for your reference.

Criteria	Exemplary	Proficient	Satisfactory	Needs Improvement
Data acquiring and Preprocessing	9 - 10 points The submission provides a comprehensive overview of data sources, detailing advanced acquisition methods (e.g., web scraping, APIs, local businesses, or data banks). It emphasizes the effort in acquiring	6 - 9 points The submission effectively outlines the sources of data and preprocessing steps. It shows good effort in data acquisition (using APIs, data banks, or real data), offering	3 - 6 points The submission includes basic information about data sources, mostly relying on simple sample data rather than real data acquisition. It outlines some	0 - 3 points The submission provides minimal information on data acquisition, showing little to no effort in sourcing real data (relying on basic sample data). It lacks clarity

	real data over sample data, outlining every preprocessing step and justifying choices with thorough explanation.	clear methodologies and reasons for the approach.	preprocessing steps but lacks depth and comprehensive justification.	and sufficient detail in preprocessing methodologies.
EDA Insights	9 - 10 points The EDA presents professional-grade visualizations and a compelling narrative. It uncovers deep, actionable business insights that directly address the core problem, clearly articulating their strategic implications and value for a BI graduation project.	6 - 9 points The EDA includes relevant visualizations and narratives that explain insights derived from the data. It clearly articulates the significance of these insights in a BI context and how they relate to the project's objectives.	3 - 6 points Some analysis is presented, but the derived insights are vague or lack business relevance. Visual aids may not fully support the conclusions, and the connection to actionable BI outcomes is weak.	0 - 3 points Very little analysis is provided. Visualizations are poor or absent, and there is a failure to derive any meaningful business insights or explain the strategic significance of the data.

ML models building and testing results	9 - 10 points The submission details the ML models built, rigorously justifying choices based on business needs. It includes a comprehensive methodology, outcomes, and a strong impact analysis demonstrating how the models solve the specific BI problem and deliver measurable value.	6 - 9 points The submission describes the ML models built, outlining methodologies and results. It includes a discussion of how the models address the business problem and provides some analysis of their potential impact in a BI context.	3 - 6 points Basic information on the ML process is included but lacks depth. The connection between the models and the BI problem is weak, and there is little to no analysis of the models' potential business impact.	0 - 3 points The submission offers minimal or unclear information about the ML models. It fails to connect the modeling efforts to any BI problem and lacks an analysis of business impact or value.
	9 - 10 points The documentation is exceptionally well-structured,	6 - 9 points The documentation is well-written and	3 - 6 points	0 - 3 points The documentation is poorly

Documentation	clear, and highly relevant, effectively guiding the reader through every aspect of the project with a professional tone. A perfectly organized GitHub repository based on the template is provided, containing all files, data, and reporting.	structured, with clarity in presenting information and relevance to the project goals. A well-structured GitHub repository based on the template is provided, with most files, data, and reporting included.	Documentation lacks some organization or clarity; relevant information is present but may be difficult to follow in some areas. A GitHub repository is present but may lack organization, template adherence, or some files/data.	written and lacking organization, making it difficult to understand the project's key components or relevance. The GitHub repository is missing, poorly organized, fails to use the template, or is missing key files.
	9 - 10 points The presentation is compelling and professional, utilizing expert data storytelling suitable for a BI	6 - 9 points The presentation clearly communicates the project narrative using solid data	3 - 6 points The presentation covers the project narrative but lacks strong data storytelling. It struggles to engage	0 - 3 points The presentation is unclear, disengaging, and lacks data storytelling. It fails to

Presentation	graduation project. It effectively engages stakeholders, translating complex technical findings into clear, actionable business recommendations and strategic value.	storytelling techniques. It engages stakeholders and successfully translates technical results into understandable business insights and recommendations.	stakeholders or translate technical findings into clear business value, leaving the audience somewhat confused about the actionable takeaways.	communicate with stakeholders effectively and does not translate technical work into any understandable BI context or value.
